SL SERIES | LVDT

The SL series offers an ultra-robust, stable construction and features a complete stainless steel housing. Predestined for use in harsh industrial environments.

- Measurement ranges 10...600 mm
- Housing ø20 mm
- Linearity up to ±0,10 % of full scale
- Protection class IP67, optional IP68
- Sensor working temperature up to 200 °C
- Customized versions available

eddylab

LVDTs (Linear Variable Differential Transformers) are inductive sensors excellent for use in harsh industrial environments, e.g. high temperature and pressure ranges, as well as high accelerations and measuring cycles.

The **SL series** offers ultimate reliability and precision in a small size, and is designed for industrial and lab use. The sensors can also be used under water because of their high protection class and the stainless steel housing.

Note: A measuring amplifier is required to operate LVDT sensors. eddylab offers the digital signal conditioners **DEEneo** for DIN rail mounting and **DEEneo-ISC**, a version integrated into the sensor connection cable. See p.5 or separate data sheets at www.eddylab.com.
The electronics take over the sensor supply and convert the sensor signal into a standardized, analogue output signal with the help of a microcontroller output signal. They also feature simple adjustment (teach function) and linearization of the sensor characteristic curve to achieve the highest possible precision.

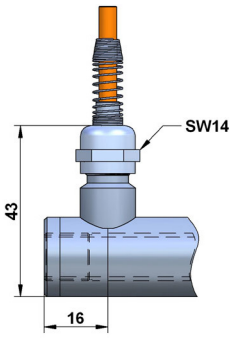
SENSOR TYPES

CABLE OUTPUT RADIAL



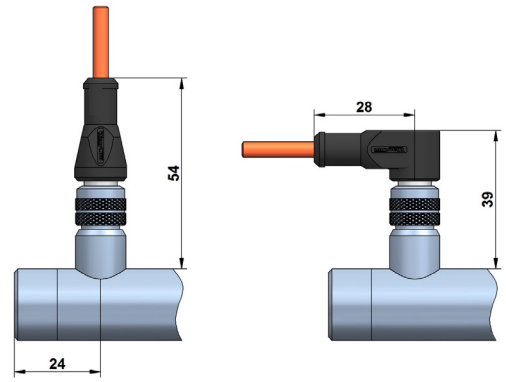
Sensors with cable output have a cable fitting and a spring for bend protection of the cable. For installation, the bending radius should not be less than 3 times the cable diameter. The standard cable length is 2 m.

Instruments with option H for temperatures up to 150 °C feature a PTFE cable.

Sensors have a through hole. Please use this type for application at heavy dirt exposure. The movement of the push rod removes the dirt from the sensor and conveys it to the rear.

The variant G (rod end bearings) is closed on the rear end for structural reasons.

CONNECTOR OUTPUT RADIAL (CABLE WITH STRAIGHT OR ANGULAR CONNECTOR)

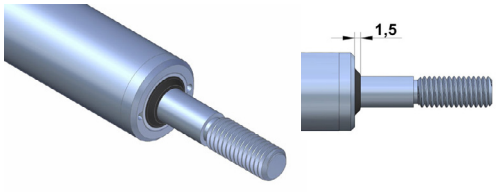


For sensors with connector output the cable has to be ordered separately. You can choose from a cable with a straight connector or with an angular connector.

The connector is protected from accidental removal by a threaded fitting (M12). The cable lengths are 2/5/10 m.

When bolted, the connector pair has the protection class IP67.

WIPER RING (OPTION W)



Sensors with guided push rod (type „SG“) or rod end bearings („G“) can be equipped with a wiper ring to prevent the penetration of dust, dirt and metal swarf.
The displacement speed of the push rod is limited to 2 m/s and the working temperature to -35...+100 °C.

DEENEO | DEENEO-ISC

The **DEEneo** signal conditioner was developed for operating inductive LVDT sensors (full bridge). The electronics supply the sensor and convert the sensor signal into a standardized, analogue output signal with the help of a microcontroller. A push button (SET button) is used for the basic configuration and to set the measuring range limits - this enables quick and easy adaptation to the customer's application. Where possible, eddylab calibrates the sensor and electronics together. The sensor characteristic curve can be linearized to meet the highest demands on the accuracy of the measuring chain. Further features can be configured via the **eddySetup** configuration software. Further information can be found in the DEEneo and DEEneo-ISC data sheets.
