New company location at Otterfing

eddylab GmbH has moved to new company building

Otterfing, 23.07.2018. – After 12 month of construction eddylab has moved to its new company location in Otterfing.

eddylab GmbH, specialist in distance and position measurement technology, has moved its headquarter to Otterfing, located in the south of Munich. The new construction occupies a total area of 2,600 m², which means an enormous increase of the production and office area.

The two-story building with a large glass front offers a production and logistic department on the ground floor. The first floor accommodates offices, laboratories and meeting rooms.

“We have already settled in well, - precisely because the new building offers better working conditions. It combines all the demands we made on a modern workplace: good accessibility and a modern working atmosphere to come up with new ideas”, summarises eddylab CEO Michael Reiter. “The new building provides potential to expand our product range: we are currently focused on the development of innovative draw wire sensors and tailored customer solutions, which we can now manufacture faster and more flexibly.”

About eddylab

eddylab is a modern company, which passionately designs, constructs and produces sensors for the measurement of distances and positions. We eventually provide entire system solutions. The company's product portfolio includes eddycurrent probes, inductive transducers, draw wire sensors, digital gauges, digital rulers, digital magnetic scales, display controls, signal conditioner and encoders. Besides our standard products in stock for a plenitude of industrial applications our strength is the development of custom-made sensors. In close cooperation with our customers we develop ultra-precise sensors true to the motto "sensors – built to perform".
